

UNIVERSITY *of* MARYLAND EASTERN SHORE

## Department of the Built Environment

The Construction Management Technology (CMT) program is designed to develop a capable and knowledgeable workforce and to prepare interested individuals for job opportunities in the field of construction. The program's focus is on practical aspects of construction technology, offering a flexible pathway for students' success, by combining current construction knowledge and techniques with practical industrial experience. In particular, the program focuses on the management aspect of designing and building residential and commercial structures. Students can either enter the program directly from high school or take basic qualifying courses at neighboring community colleges, or any other post-secondary institution and have their courses transferred to the CMT program. Also, the Construction Management Technology program enjoys the support of an Industry Advisory Board (IAB) in developing the most suitable training program to accommodate today's industry requirements.
